

## Apple Chronology

The apple seed falls onto the ground.

The apple seed sprouts.

The sprout begins to grow leaves.

The sprout grows a trunk and branches.

There is a bud on the apple tree branch.

The bud opens up into a flower.

Bees come to gather pollen and nectar  
from flower.

The flower is pollinated.

The petals fall off the flower.

A small apple begins to grow.

The apple gets bigger.

The apple turns red and sweet.

You pick the apple.

You eat the apple and find seeds inside!
