

WEATHER HARVEST

Farmers work with nature.

Soil nutrients, planting, weed and insect control, machinery work, crop records, and harvest are things farmers can control and manage. Farmers cannot control the weather.

Crops may need to be planted more than once in the spring. Most crops are ready for harvest in late summer and fall, but may be wiped out by a single weather event. Play the weather harvest game to see if you will be able to bring in your crop.

How to play:

1. Each player puts a crop on START and takes turns rolling the die, moving the crop, and following the directions on each square. Some squares are crop images. Each kind of crop appears three times. If you land on the crop image that is your playing piece, roll again.
2. Keep playing until each player brings in his or her crop. You don't need an exact roll to bring in your harvest.
3. The first person to bring in his or her harvest wins.

on the game board and tape pieces.
ing six small pieces of paper from a cup.
